

They won't believe these are your System i Applications !

WebSmart® Presto™ instantly Web Enables your System i 5250 apps **Visit BCD - Booth 404**

WebSmart Presto works instantly. You simply select one of Presto's web skins or create your own to add value and extend the life of your 5250 applications. Further enrich the user experience by adding new functions to your web enabled screens at your own pace.

Add features such as pop-up calendars, item images, graphs, drop downs boxes, and links to allow mouse navigation and more. Presto gives you full access and control to the client side code to integrate new UI elements, AJAX, and SOA/web services functionality so you can extend your apps with data from other sources. Your users won't believe these are the same base apps!

- ✓ **No need to change** any RPG, Cobol or DDS source code.
- ✓ **Zero 5250 OLTP** – uses 100% batch processes.
- ✓ **Global options** give all your apps an instant modern web look.
- ✓ **You have full control** to customize screens with Presto's IDE.
- ✓ **Runs in a browser** with no other PC software required.
- ✓ **Optional Free* Nexus Portal** for application frameworks, Dashboards, Web menus, Controlled access to App's & more.

Original 5250 green screen program

Instant Web enabled program with no HTML changes

Enhanced screen with pop up calendar, item image, Google map, drop down box and Flash graph

Presto is an enterprise-ready solution with project management and multi-lingual support. The auto-login feature hides traditional 5250 System i navigation for tighter web application integration. You can host Presto applications within Outlook® or Google™ gadgets. However, our Nexus portal gives System i users more advantages, such as System i hosted, single point secure access to all web functionality and enterprise information. Presto embeds directly in Nexus, alongside frameworks, dashboards, web menus, calendars, spool files *and more.*

"In 30 minutes I had all my System i applications web enabled using Presto! I have a lot of RPG programs and limited HTML experience, so that was impressive. My applications now look like real web apps."

Ellery Soifer, CTO, Tricots Liesse, Montreal

Our innovative licensing and pricing options will meet your budget needs. Choose base, concurrent user or unlimited user licensing options to fit the needs of your organization -- **and Save Big !**

Try **WebSmart® Presto™** to modernize all your System i apps and turn your users into believers !
