

Robot/SPACE—Instant Disk Space Information For Your System i

**New
Version 3.0**

Check Your Disk Space Usage Quickly

Put Robot/SPACE®, the disk space management software for your IBM® System i™, to work and you're more efficient—instantly. With Robot/SPACE, you can set storage thresholds for your monitored ASPs and iASPs, monitor active job storage, set size thresholds, and automatically hold jobs. Robot/SPACE also can use Robot/ALERT®, the system event notification software, to send a text, pager, or e-mail message to an operator when a threshold is met. Robot/SPACE presents information in an easy-to-read graphical interface, so there's no need to print out and search through long text-based reports.

Resolve Storage Issues Automatically

Robot/SPACE monitors your ASPs, iASPs, the IFS, libraries, active job storage, QTEMP storage, and spooled file storage, including tracking detailed information for every threshold exception. When an ASP or active job exceeds its threshold, Robot/SPACE sends a message to a message queue. Storage Audits perform cleanup tasks on your system objects. Just click to view system, monitor, audit, collection, and query reports. Use On-Demand Reporting to create and save HTML, text, or PDF reports. Robot/SPACE also lets you compare two collections from the same group.

Manage System i Disk Space With Robot/SPACE

Call us today at **1-800-328-1000** for your FREE Robot/SPACE Information Kit. Or, visit our Web site, www.helpsystems.com/diskspace to learn how you can manage your disk space with Robot/SPACE.
